A Guide to Your First Launch

Installation Steps

Follow these simple steps to install Apple AI on your macOS device.

1. Download the **Apple_Ai_Universal.dmg** file.

2. *Open* the downloaded file and drag the **AppleAi** application into your Applications folder.

3. Once the file transfer is complete, close the installation interface.

4. Launch the app from either your Launchpad or directly from the Applications folder.
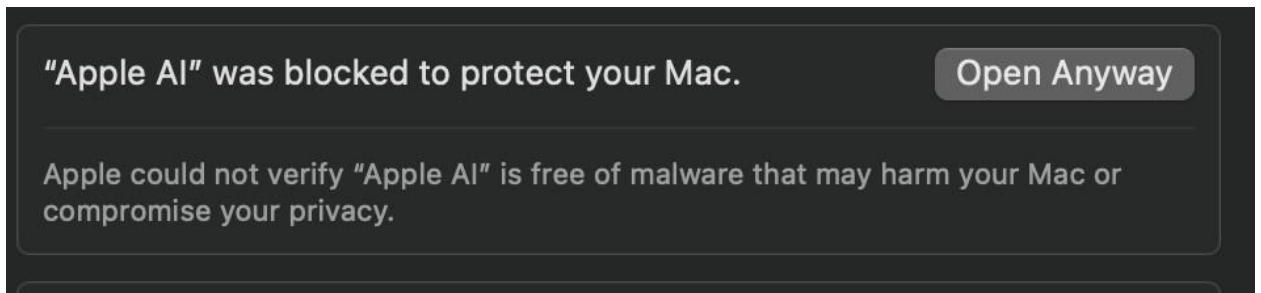

First Launch Security

The first time you open Apple AI, you may see a security warning. This is a standard macOS feature called Gatekeeper. You can easily bypass it with these steps:

1. When the warning appears, simply click the **"Done"** button to dismiss it once.

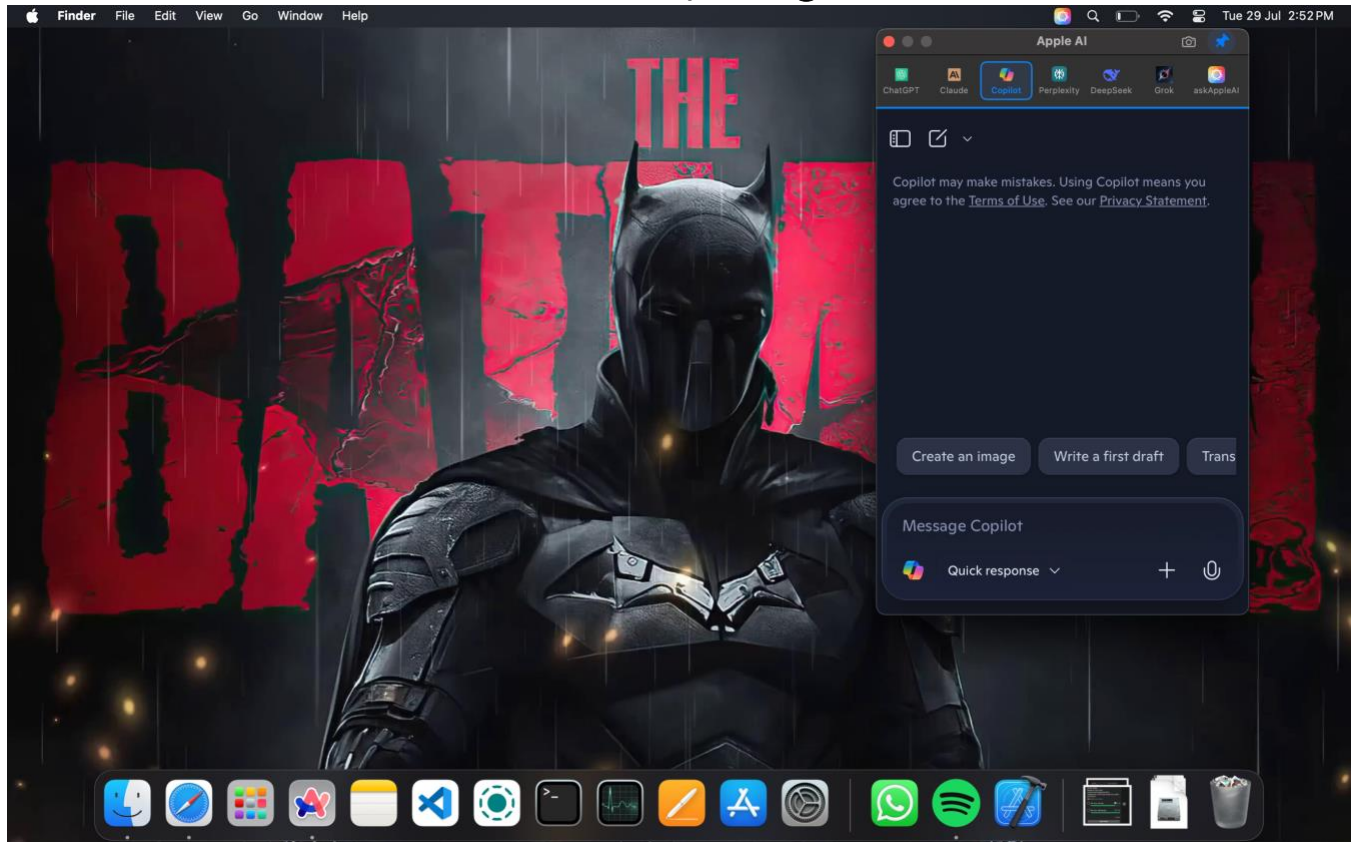

2. Navigate to your **System Settings** > **Privacy & Security**.

3. Scroll to the very bottom of the window.

4. You will find an option to open the app; click on **Open Anyway**.

You are ready to use 🤩
